

GREEN EARTH

PRODUCT CATALOG (V.4)

MISSION STATEMENT

US Green Earth is committed to helping sustain the global environment by being a responsible yet resourceful supplier of foodservice packaging disposables to the restaurant industry for over 30 years. Our corporate mission is to provide green certified compostable products, made from sustainable materials, to our customer in an effort to help foodservice establishments meet all of the state and local municipal zero waste initiatives. Our mission is also to promote, advocate and communicate a positive, robust environmental vision for compostable, disposable packaging and to support innovative, functional packaging materials, and product categories that help promote sound, low carbon footprint economics as well as international environmental health.

COMPANY PROFILE

In association with a family of international partners since 2001 US Green Earth has been utilizing the production of 38 state of the art automatic production lines with annual capacity of over 40,000 tons in a factory that is over 1,800,000 square feet. With over 1400 employees US Green Earth is one of the largest pulp and fiber disposables manufacturers in the world making biodegradable paper plates, bowls, trays, clamshells, cups and cutlery. The raw material that is used is from natural plant fibers such as bagasse, bamboo, couch grass, paper and wheat straw, which are all sustainable, fast growing, easily compostable and eco-friendly.

US Green Earth products have also all been certified by FDA, BRC, BPI, OK-Compost, NSF, ISO9001 and ISO14001. Green Earth prides itself on delivering outstanding quality at competitive prices that enables a dynamic win-win partnership with our global customers.

Wooden Coffee Stirrer / PLA Meat Trays	21

ZERO WASTE IN CALIFORNIA

In California the state Assembly Bill (AB) 75 was passed in 1999 and the State Agency Model Integrated Waste Management Act took effect on Jan. 1, 2000. The act mandated that state agencies develop and implement an integrated waste management plan which outlines the steps to be taken to achieve the required waste diversion goals. The ultimate goal for the state of California is to be at zero waste by the year 2040.

The current statutes require all state agencies and large state facilities to divert at least 50% of their solid waste from disposal facilities on and after Jan. 1, 2004.

Legislation enacted in 2011 AB 341 , makes a legislative declaration that it is the policy goal, of the state of California, that not less than 75 %of solid waste generated be source reduced, recycled, or composted by the year 2020.

In October of 2014 Governor Brown signed AB 1826 , requiring businesses, including State Agencies, to recycle their organic waste on and after April 1, 2016, depending on the amount of organic waste they generate per week. This law also requires that on and after January 1, 2016, local jurisdictions across the state implement an organic waste recycling program to divert organic waste generated by businesses, including State Agencies that meet the progressive thresholds.

BIO-MATERIALS

BAGASSE

Bagasse is a pulp fiber material made from ground up sugar cane reed stalk. It's composition looks and feels like a paper pulp substrate. It is very resistant to food oils and can tolerate heat from a microwave or an oven as well as withstand a frozen environment. Bagasse is a compostable material that decomposes in about 180 days under normal compost conditions.

BAMBOO

Bamboo is a pulp fiber material made from ground up bamboo tree stalk. It's composition looks and feels like a paper pulp substrate. It is very resistant to food oils and can tolerate heat from a microwave or an oven as well as withstand a frozen environment. Bamboo is a compostable material that decomposes in about 180 days under normal compost conditions.

PLA

PLA stands for polylactic acid and is the sucrose material from the kernels of corn. It's composition looks and feels like clear plastic. It is very sensitive to heat and frozen environments. PLA is a compostable material that decomposes in about 180 days under normal compost conditions.

CPLA

CPLA stands for crystallized polylactic acid and is the sucrose material from the kernels of corn. It's composition looks and feels like clear plastic. It is not as sensitive to heat and frozen environments because it's molecular structure has been crystallized. PLA is a compostable material that decomposes in about 180 days under normal compost conditions.

WOOD

Disposable foodservice wood products come from a variety of trees and are ideal for products like cutlery and serving utensils. Since wood fibers are from a natural source these products can be recycled or composted under normal compost conditions.

PAPER (MOLDED FIBER)

Disposable foodservice paper products come from a variety of trees and even recycled paper substrates. Paper is ideal for products like sandwich wrap, drink carriers, cups and boxes. Since paper comes from a natural source these products are also compostable under normal compost conditions.
